WELCOME TO OUR TRAINING CENTERS

Dear Customer, Dear Partner,

2025 saw the latest evolution in IT take shape, with Artificial Intelligence (A.I.) becoming more business-critical than ever, and being used at a strategic level across diverse business sectors. To prepare for 2026, we have been developing a portfolio of A.I. trainings to allow our clients to stay on the cutting edge of this revolution. These newly developed trainings, demonstrate that Business Training continues to invest in the future for our clients, so that they can keep abreast of the rapidly developing world of IT solutions and services. We will continue to build tailor-made trainings in order to fit your expectations. As always, our dedicated team of Practice Leaders have performed a thorough review of our offerings, to ensure that they match your needs for 2026!

We look forward to seeing you soon!

The Business Training Team

HERE ARE SOME OF OUR CLIENTS

NEWS FOR 2026

Business Training is ready for the coming 12 months, having prepared multiple new trainings for our clients. Look out for the new Artificial Intelligence, CRM, Microsoft, CISCO and Red Hat trainings, amongst others.

As we are living in a rapidly changing IT world, we will keep developing training solutions throughout the course of the year, so please don't hesitate to contact us directly for any specific enquiries or requirements, as we can create bespoke trainings for specific client needs.

Of course, our partnerships with **Microsoft** as **Gold partner**, **Red Hat, CISCO, PRINCE2®** and **ITIL®** remain as part of our core offering for 2026.

Business Training is currently one of the largest **Pearson Vue Select Test Centers** with 14 testing seats for high-end exams such as GMAT, SELT or all other certification exams.

We also offer fully equipped modern training rooms in our spacious training centers which are ideally situated in Brussels and Luxembourg.

In addition to this new catalog 2026, we offer an extensive list of tailormade trainings. Please call our sales team in Brussels & Luxembourg.

CONSULTING SERVICES

Business &
ICT Consulting

In synergy with **Business Training**, our consulting company **Business & ICT Consulting** operates all over Europe, offering our employees a favorable environment to develop their skills within our customer's environments.

These long term assignments allow for an efficient implementation and management of our customer's ICT departments, aligned with new arising models of organizations, built on both sustainable development and innovation.

SERVICE MANAGEMENT

SESSIONS

ITIL® 4 Foundation [Most wanted] *(Exam included)*

ITIL® has led the IT Service Management industry with guidance, training and certification programs for over 30 years. ITIL® 4 brings ITIL® up to date by re-shaping much of the established ITSM practices in the wider context of customer experience, value streams, and digital transformation, as well as embracing new ways of working such as Lean, Agile, and DevOps.

ITIL® 4 provides the guidance organizations need to address new service management challenges and utilize the potential of modern technology. It is designed to ensure a flexible, coordinated and integrated system for the effective governance and management of IT-enabled services.

An exam voucher that is valid for one year will be issued on the first day of the training

The ITIL 4 Foundation course is provided by Business Training, an ATO of PeopleCert.

Prices: Classroom *1.500 € excl. VAT / participant*
E-Learning *including exam 850 € excl. VAT / licence*

ITIL® 4 Specialist - Create, Deliver and Support *(Exam included)*

This module covers the 'core' service management activities and expands the current scope of ITIL® to cover the 'creation' of services. It focuses on the integration of different value streams and activities to create, deliver and support IT-enabled products and services whilst also covering supporting practices, methods and tools.

It covers service performance aspects and provides practitioners with an understanding of service quality and improvement methods.

It enables IT practitioners to continue to deliver innovative yet reliable technology-enabled services to their customers in an increasingly competitive market.

An exam voucher that is valid for one year will be issued on the first day of the training

ITIL 4 Specialist: Create, Deliver and Support course is provided by Business Training, an ATO of PeopleCert

ITIL® 4 Strategic Leader - Digital and IT Strategy *(Exam included)*

The pace of evolution in the digital world has never been so fast and organizations need to be flexible and adapt to the ever-changing environment if they want to keep providing value to their customers while remaining competitive in the marketplace. This module focuses on the alignment of digital business strategy with IT strategy. It covers how disruption from new technologies are impacting organizations in every industry and how business leaders are responding.

It adds a new perspective to the ITIL® suite and elevates the discussion around ITIL® concepts to a strategic level among business leaders and aspiring leaders. It helps IT leaders and aspiring leaders build and implement effective IT and digital strategy that can tackle digital disruption and drive success.

An exam voucher that is valid for one year will be issued on the first day of the training

PORTFOLIO, PROGRAM & PROJECT MANAGEMENT	SESSIONS

PRINCE2® 7th ed. - Foundation *(Exam included)*

PRINCE2® is one of the world's leading project management methods. It uses the experience gained from thousands of projects and it is designed to be tailored to any type of project. The 7th edition addresses changes in the project management sector and adapts to evolving working practices and technologies.

The Foundation module consists of a detailed introduction to the method. The focus is on acquiring the terminology, knowledge and understanding of PRINCE2® (principles, people, practices and processes).
An exam voucher that is valid for one year will be issued on the first day of the training.

The PRINCE2® 7 – Foundation course is provided by Business Training, an ATO of PeopleCert.

Professional Scrum Foundations

The Professional Scrum Foundations (PSF) course is a 2-day course that teaches Scrum in a highly practical way. Working in a series of Sprints, teams of students build a software application, thereby facing real-life problems. The mechanics, roles, principles and (empirical) process of Scrum are demonstrated. Common missteps and misunderstandings are discussed so students grow a higher awareness of their symptoms.

Price: 1.550 € excl. VAT / participant

28-29 May
29-30 October
10-11 December

Also available in FR or NL, contact us for more information

Professional Scrum Master I *(Exam included)*

The Professional Scrum Master I (PSM) course is a 2-day course that covers the principles and (empirical) process theory underpinning the mechanics, rules and roles of the Scrum framework. Advanced tools for servant-leadership are provided to increase a Scrum Master's effectiveness. These tools relate to behavioral shifts, working with people and teams, coaching and facilitation techniques, and addressing the organization.

Price: 1.550 € excl. VAT / participant
E-Learning including exam 890 € excl. VAT / licence

05-06 March
18-19 June
01-02 October
03-04 December

Professional Scrum Master II *(Exam included)*

The PSM II is an advanced course that will raise your understanding of the stances that characterize an effective Scrum Master and Servant Leader. The class will teach you about complementary practices and the needed skills to enable you to have the right types of conversations and how to apply them to become an even better Scrum Master. Unlike the Professional Scrum Master (PSM) course which, mainly from a Scrum Master perspective, focuses on how to use Scrum, the Scrum framework and the role of the Scrum Master within it, the PSM II aims to clarify the desired mindset and behavior that is necessary to become an effective Scrum Master.

Price: 1.550 € excl. VAT / participant

Professional Agile Leadership Essentials

The workshop provides a foundation for the role that leaders play in creating the conditions for a successful agile transformation. Leaders and managers are critical enablers in assisting their organizations becoming successful, yet the role of leaders and managers in an agile organization can be quite different from what they are used to. This workshop uses a combination of instruction and team-based exercises to help participants learn how to form and support agile teams to achieve better results, and how to lead the cultural and behavioral changes that organizations must make to reap the benefits of an agile product delivery approach.

Practical Project Management With TSPM Certification

The application of knowledge is a key success factor to learning. This course goes beyond the traditional project management class by first exposing the students to a rigorous study of the successful TenStep Project Management methodology. The students are then able to demonstrate their knowledge by managing a project from beginning to end with a software-based project simulation package. As a result, the students are more prepared to apply the methodology to real life situations.

PORTFOLIO, PROGRAM & PROJECT MANAGEMENT | SESSIONS

DevOps Essentials

The DevOps movement believes there is a better way of building teams and software that has rapidly spread across the development and operations community. The culture of a DevOps organization and team is the heart of the movement and the most important pillar to implement. In this two day course you will explore the origins of the movement, the building blocks of Agile and Lean and the cultural changes you and your organization will need to adopt to become a successful DevOps team. In a blended mixture of theory, hands on, workshops and the use of tools such as Jenkins you will learn how to plan, organize and work in an atmosphere of collective responsibility.

Special PMP training and coaching

Specialized PMP (Project Management Professional) training and coaching typically aim to prepare individuals for the Project Management Professional certification offered by the Project Management Institute (PMI).

This training program will be covering a comprehensive coverage of the PMBOK (Project Management Body of Knowledge) Guide, which serves as the foundation for the PMP exam. This includes an in-depth review of project management processes, knowledge areas, and best practices outlined in the PMBOK. The training phase of this course occurs through Interactive Learning Sessions delivered by experienced instructors or coaches will be involving lectures, discussions, and interactive exercises to reinforce concepts and aid in understanding complex project management topics. For the coaching phase, practice questions and mock exams will help participants assess their readiness and identify areas needing further study. In addition, the participants will be examining real-world case studies ; by the analysis of real-world project management scenarios and case studies, participants will be able to apply theoretical knowledge to practical situations, for a better understanding on how to implement PMP principles in various contexts.

LEAN IT Startup

The concept of "Lean Startup" is a methodology for business development focused on creating and managing startups and innovative projects.

This approach, popularized by Eric Ries, aims to reduce risks associated with launching new products or services by adopting an iterative and customer-centric methodology. The Lean Startup aims to minimize waste by avoiding the development of expensive and complex products that might not meet market needs. By adopting an agile approach, based on rapid testing and continuous adjustments, startups can be more responsive and increase their chances of success in the market.

AI for the Project Manager

The aim of the Project Manager training incorporating AI is to equip project management experts with the skills needed to seamlessly integrate and apply artificial intelligence (AI) technologies throughout project management phases, including execution and delivery. Incorporating AI in project management will provide an in-depth understanding of AI concepts, algorithms, and specific applications relevant to project management. Furthermore, this course will cover how to integrate AI tools and techniques into each phase of a project's lifecycle, (from planning to execution, monitoring, and closure) and how to effectively collect, manage, and analyze data to make informed decisions. The overarching objective of this training is to equip project managers to strategically integrate AI tools and concepts to enhance the efficiency, quality, and success of the projects they oversee.

AI for management : from understanding to action

This AI training is specifically addressed to deciders, CEO's, CTO's or consultants who wish to integrate AI in a strategic and operational way within their organizations. Structured in 4 successive steps, it offers a balance between theory, thinking strategy and practice. A follow-up one month after the course is proposed online in order to follow-up on participants over time. The AI basics are approached in an accessible way in order to give a clear overview of the possibilities and risks relative to AI technologies. Then a co-construction session favors collective thinking on automating intellectual tasks and their impacts on work processes. Finally a practical workshop guides participants on identifying their automated key processes. The experience and pedagogical approach guarantee a pragmatic training, accessible and directly actionable, meant to lead organizations sponsors in their AI transformatio1n.

SCALED AGILE FRAMEWORK - SAFE

SESSIONS

SAFe Agile Software Engineering *(Exam included)*

The discipline of software engineering has evolved over the past decades with the introduction of Lean-Agile and DevOps principles and practices. New skills and approaches help organizations deliver software-centric solutions faster, more predictably, and with higher quality. During this three-day workshop-oriented course, attendees learn the foundational principles and practices that make up the Agile Software Engineering discipline.

SAFe DevOps *(Exam included)*

To compete in a disruptive global market, every organization needs to deliver valuable technology solutions at the speed of business. This requires a shared DevOps mindset among all the people needed to define, build, test, deploy, and release software-driven systems — not just the engineers operating a CI/CD pipeline.
The two-day, interactive SAFe® DevOps course helps people across technical, non-technical, and leadership roles work together to optimize their value stream from end to end. Attendees will learn what DevOps is, why it is important to every role, and design a continuous delivery pipeline that is tailored to their business. Attendees work in cross-functional teams to map their current state value stream from concept to cash, identify major bottlenecks to flow, and build an actionable implementation plan that will accelerate the benefits of DevOps in their organization.

Microsoft Azure

AZ-140 Configuring and Operating Microsoft Azure Virtual Desktop

This course teaches Azure administrators how to plan, deliver, and manage virtual desktop experiences and remote apps, for any device, on Azure. Lessons include implementing and managing networking for Azure Virtual Desktop, configuring host pools and session hosts, creating session host images, implementing, and managing FSLogix, monitoring Azure Virtual Desktop performance and health, and automating Azure Virtual Desktop management tasks.
This course prepares for the Microsoft exam AZ-140

Microsoft Azure

AZ-204 - Developing Solutions for Microsoft Azure

This course teaches developers how to create end-to-end solutions in Microsoft Azure. Students will learn how to implement Azure compute solutions, create Azure Functions, implement and manage web apps, develop solutions utilizing Azure storage, implement authentication and authorization, and secure their solutions by using KeyVault and Managed Identities. Students will also learn how to connect to and consume Azure services and third-party services, and include event- and message-based models in their solutions. The course also covers monitoring, troubleshooting, and optimizing Azure solutions.

AZ-801 - Configuring Windows Server Hybrid Advanced Services

Configure advanced Windows Server services using on-premises, hybrid, and cloud technologies.
This course teaches IT Professionals to configure advanced Windows Server services using on-premises, hybrid, and cloud technologies. The course teaches IT Professionals how to leverage the hybrid capabilities of Azure, how to migrate virtual and physical server workloads to Azure IaaS, and how to secure Azure VMs running Windows Server. The course also teaches IT Professionals how to perform tasks related to high availability, troubleshooting, and disaster recovery. The course highlights administrative tools and technologies including Windows Admin Center, PowerShell, Azure Arc, Azure Policy, Azure Monitor, Azure Update Manager, Microsoft Defender for Identity, Microsoft Defender for Cloud, and IaaS virtual machine administration.

AZ-900 - Microsoft Azure Fundamentals [Most wanted]

This one-day course will provide foundational level knowledge on core Azure concepts; core Azure services; core solutions and management tools; general security and network security; governance, privacy, and compliance features; Azure cost management and service level agreements. Note: This course provides an Azure pass and time for students to participate in hands-on labs. If you do not need hands-on experience, consider the AZ-900T01: Microsoft Azure Fundamentals (1 day) course.

DP-900 - Microsoft Azure Data Fundamentals

In this course, students will learn the fundamentals of database concepts in a cloud environment, get basic skilling in cloud data services, and build their foundational knowledge of cloud data services within Microsoft Azure. Students will identify and describe core data concepts such as relational, non-relational, big data, and analytics, and explore how this technology is implemented with Microsoft Azure. They will explore the roles, tasks, and responsibilities in the world of data. The students will explore relational data offerings, provisioning and deploying relational databases, and querying relational data through cloud data solutions with Microsoft Azure. They will explore non-relational data offerings, provisioning and deploying non-relational databases, and non-relational data stores with Microsoft Azure. Students will explore the processing options available for building data analytics solutions in Azure. They will explore Azure Synapse Analytics, Azure Databricks, and Azure HDInsight. Students will learn what Power BI is, including its building blocks and how they work together.

Managing Containers with Kubernetes and Microsoft Azure

Containers provide a very useful platform to host applications. They are light-weight and performant and can easily be redeployed across different environments. Once you have a bunch of containers to manage, you will need an orchestration tool to simplify the deployment and configuration of your containers. That is where Kubernetes comes into play. In this course you will learn how to use docker and Kubernetes to manage containers, both on-premises and in the Azure Cloud platform.

Data Engineering on Microsoft Azure

In this training the modern data warehouse approach to handling both cloud based as well as on-prem data is explained in detail. First students see how to setup an Azure Data Lake and inject data with Azure Data Factory. Then students learn how to cleanse the data and prepare it for analysis with Azure Synapse Analytics. The Lambda architecture (with focus on both batch data as well as a speed layer where live events are processed) is discussed as well, where the speed layer gets implemented with Azure Data Explorer. In the end, participants have hands-on experience with the most common Azure services to load, store and process data in the cloud.

Building your own Models with Azure Machine Learning

In many AI solutions pre-trained models (such as chatGPT) are used. But in some cases, custom models trained on your corporate data is essential to make predictions within your business processes. This training focusses on the latter. First you will learn how to train models locally using Python. Then the focus shifts on how Azure Machine Learning provides extra features, such as scale out training, easy deployment and monitoring.

AI-900T00-A: Introduction to AI in Azure [New]

This course introduces fundamentals concepts related to artificial intelligence (AI), and the services in Microsoft Azure that can be used to create AI solutions. The course is not designed to teach students to become professional data scientists or software developers, but rather to build awareness of common AI workloads and the ability to identify Azure services to support them. The course is designed as a blended learning experience that combines instructor-led training with online materials on the Microsoft Learn platform (https://azure.com/learn). The hands-on exercises in the course are based on Learn modules, and students are encouraged to use the content on Learn as reference materials to reinforce what they learn in the class and to explore topics in more depth.

MICROSOFT 365

MS-102 Microsoft 365 Administrator [Most wanted]

This course covers the following key elements of Microsoft 365 administration: Microsoft 365 **tenant management**, Microsoft 365 **identity synchronization,** and Microsoft 365 s**ecurity and compliance.**

In **Microsoft 365 tenant management,** you learn how to configure all the options, component services, user accounts and licenses, security groups, and administrative roles. You then transition to configuring Microsoft 365, with a primary focus on configuring Office client connectivity. Finally, you explore how to manage user-driven client installations of Microsoft 365 Apps for enterprise deployments. The course then transitions to an in-depth examination of Microsoft 365 identity synchronization.

In **Microsoft 365 security management,** you begin examining the common types of threat vectors and data breaches facing organizations today, and how MS 365's security solutions address each of these threats. You are introduced to the MS Secure Score, as well as to Microsoft Entra ID Protection. You then learn how to manage the Microsoft 365 security services, including Exchange Online Protection, Safe Attachments, and Safe Links. Finally, you are introduced to the various reports that monitor an organization's security health. You then transition from security services to threat intelligence; specifically, using Microsoft 365 Defender, Microsoft Defender for Cloud Apps, and Microsoft Defender for Endpoint.

The **Microsoft 365 compliance management** begins with an overview of all key aspects of data governance, including data archiving and retention, Microsoft Purview message encryption, and data loss prevention (DLP). You then delve deeper into archiving and retention, paying particular attention to Microsoft Purview insider risk management, information barriers, and DLP policies. You then examine how to implement these compliance features by using data classification and sensitivity labels.
This course prepares for the Microsoft exam MS-102

MS-721 - Collaboration Communications Systems Engineer

This training course is designed to give participants the knowledge and skills to become a Collaboration Communications Systems Engineer. Participants should understand the fundamentals of networking, telecommunications, audio/visual and meeting room technologies, identity and access management, and Microsoft Teams.

They will gain hands-on experience configuring and deploying Microsoft Teams Phone, meetings and certified devices including Microsoft Teams Rooms and Surface Hub. The course will also cover how to manage and monitor Teams Phone, meetings, and certified devices using the Microsoft Teams admin center, PowerShell, the Microsoft Teams Rooms Pro Portal, and the Call Quality Dashboard.

In addition, the course will cover configuring and deploying Microsoft Teams Phone with PSTN connectivity through Microsoft Calling Plans, Operator Connect, Teams Phone Mobile, and Direct Routing.

Cloud Security with Microsoft Defender XDR [Updated]

Securing your on-prem or cloud infrastructure can be complex and challenging in today's world where users are working from any location on different devices. To support organizations in protecting themselves from several kinds of attacks, Microsoft offers a broad range of cloud security services. This 3-day training will make you familiar with the tools that help you protect and secure your identities, your devices, your apps and your information in Microsoft 365.

If you are interested in Microsoft Azure monitoring and security as well, we recommend you to follow our 5-day course Mastering Microsoft Cloud Cybersecurity.

PL-200 - Microsoft Power Platform Functional Consultant

The Power Platform empowers organizations to automate business processes, develop their own rich app experiences, and connect with customers better and faster. In this course, students will learn to perform discovery, capture requirements, engage subject matter experts and stakeholders, translate requirements, and configure Power Platform solutions and apps. They will supplement their learnings with hands-on labs to create application enhancements, custom user experiences, system integrations, data conversions, custom process automation, and custom visualizations. Power Platform is comprised of four key products: Power Apps, Power Automate, Power BI, and Power Virtual Agents. In this course, we will cover these four applications in depth, with additional focus on the Common Data Service, AI Builder, connectors, and portals.

Model-Driven Apps with Microsoft Dataverse in Power Apps

Built on the fundamentals of Dynamics 365, Model-Driven Apps allow you to build complex and sophisticated business apps without writing code. Model-Driven Apps follow a data-first approach. You first design the data model of your Model-Driven app using Microsoft Dataverse and then you compose the UI of the Model-Driven App. Unlike Canvas App development where the designer has complete control over app layout, with Model-Driven Apps much of the layout is determined for you and largely designated by the components you add to the app. Follow this 5-day course and become an expert in Model-Driven App design, Microsoft Dataverse and the integration with other components of the Power Platform like Power BI, Canvas Apps and Power Automate.

Microsoft Power Apps and Power Automate

Microsoft Power Apps and Microsoft Power Automate are integral components of Microsoft's Power Platform, enabling citizen developers to create robust applications and automations using a low-code approach. Power Apps empowers us to construct interactive mobile applications, while Power Automate facilitates the automation of business processes including approvals, synchronization, and more. Throughout this course, you will acquire the skills to construct Power Apps Canvas Apps and implement Power Automate processes that integrate seamlessly with your data. For those interested in developing Power Apps Model-Driven Apps, we recommend exploring the course Building Model-Driven Apps on the Power Platform.

From SharePoint to Teams: Mastering Microsoft 365 Collaboration [New]

This course equips you with the skills to master SharePoint Online and Microsoft Teams, two key tools in the Microsoft 365 ecosystem. You'll gain hands-on experience with modern interfaces, document management features like versioning and co-authoring and so on. Learn to create, structure and secure collaboration environments. By the end of the training, you will be able to design efficient collaboration and intranet platforms, integrating tools such as Power Apps, Power Automate and Viva for seamless workflows and enhanced productivity. Additionally, you will explore sharing with external users, automating tasks and implementing compliance policies, ensuring a secure, compliant and efficient digital workspace.

MICROSOFT 365

| | **SESSIONS** |

MS-900 : Microsoft 365 Fundamentals

This course provides foundational knowledge on the considerations and benefits of adopting cloud services and the Software as a Service (SaaS) cloud model, with a specific focus on Microsoft 365 cloud service offerings. You will begin by learning about cloud fundamentals, including an overview of cloud computing and specifically Microsoft cloud services. You will be introduced to Microsoft Azure, and you will examine the differences between Microsoft 365 and Office 365. You will then perform an in-depth review of Microsoft 365, including a comparison of Microsoft on-premises services versus Microsoft 365 cloud services, a review of enterprise mobility in Microsoft 365, and an analysis of how Microsoft 365 services provide collaboration. The course then analyzes how security, compliance, privacy, and trust are handled in Microsoft 365, and it concludes with a review of Microsoft 365 subscriptions, licenses, billing, and support. This course is designed for IT Professionals who deploy and manage cloud services in their organization.

This course helps learners prepare for the Microsoft 365 Certified: Microsoft 365 Fundamentals exam (MS-900).

N° 4004A - Empower your workforce with Microsoft 365 Copilot Use Cases

This one-day course is composed of two parts - Getting started with Microsoft 365 Copilot and Empower your workforce with Microsoft 365 Copilot Use Cases. The first part of the course introduces you to Copilot for Microsoft 365, examines how you can use Copilot throughout the various Microsoft 365 apps, explores best practices for using Copilot and building effective prompts, and examines how you can extend Copilot. The second part of this training content is really the heart of this course. Students perform a series of hands-on exercises involving seven Use Cases - Executives, Sales, Marketing, Finance, IT, HR, and Operations. These exercises focus on using Copilot in various Microsoft 365 apps (such as Word, PowerPoint, Outlook, and so on) to complete a series of common business-related tasks pertaining to each Use Case. To complete the Use Case exercises in this course, each student must have access to a Microsoft 365 subscription (BYOS) in which they're licensed to use Microsoft 365 Copilot. Each student must also have a Microsoft OneDrive account, since Copilot requires OneDrive to complete the file sharing tasks used throughout the Use Case exercises.

MS 55341 - Installation, Storage, and Compute with Windows Server

This 5-day course is designed primarily for IT professionals who have some experience with Windows Server. It is designed for professionals who will be responsible for managing storage and compute by using Windows Server, and who need to understand the scenarios, requirements, and storage and compute options that are available and applicable to Windows Server.

Although this course and the associated labs are written for Windows Server 2022, the skills taught will also be backwards compatible for Server 2016 and Server 2019.

The course and labs also focus on how to administer Windows Server using not only the traditional tools such as PowerShell and Server manager, but also Windows Admin Center.

Price: 2.350 € excl. VAT / participant

COLLABORATION

SESSIONS

N° 55199 - SharePoint End User

SharePoint's library system feature can provide a superior alternative to the traditional file server. SharePoint lists can be an easy-to-design and easy-to-use alternative to sharing spreadsheet files or more formal database tables. Both lists and libraries can be customized and extended to provide enhanced appearances and functionality, such as calendars and discussion boards, to name a couple. All of this collaboration can be done through a browser interface and in some cases through integration with Microsoft Office applications.

Architecting on AWS

This course focuses on the fundamentals of building IT infrastructure on the AWS platform. You will learn how to optimize the AWS Cloud by understanding AWS services and how they fit into cloud-based solutions. Best practices and design patterns are covered to help you architect optimal IT solutions on the AWS Cloud. Build and explore a variety of infrastructures through guided discussions and hands-on activity.

Generative AI Essentials on AWS [New]

In this course, you will learn about the fundamental concepts, methods, and strategies for using generative AI. You will gain a solid understanding of use cases where generative AI can provide solutions and address business needs. Additionally, you will learn about practical insights into technologies related to generative AI and how you can use those technologies to solve real-world problems. By the end of the course, you will explore project planning and how to discuss implementation of generative AI in your organization.

SERVER APPLICATION & WEB DEVELOPMENT

SESSIONS

.NET

Building Windows Applications with WPF

This course will teach you how to build business applications with Windows Presentation Foundation on top of .NET. You will learn to create functional and attractive user interfaces using XAML. Since most business applications are data-driven, you will learn how to handle data using Entity Framework Core and how to consume data from web services. Furthermore, you'll get acquainted with the MVVM pattern, making your code easier to maintain and test.

HTML5

N° 55320 - Programming with HTML, CSS, and JavaScript

This five-day instructor-led is intended for IT professionals interested in becoming client-side web developers who need to get a jump start on all three technologies. The course includes more than 30 exercises, providing a rapid hands-on introduction to the three major client-side languages: HTML, CSS, and JavaScript. Students should be prepared to cover a lot of ground quickly. Like that course, this course focuses on using HTML, CSS, and JavaScript to develop web pages, implement programming logic, define and use variables, perform looping and branching, capture and validate user input, store data, and create well-structured applications.

C#

Full Stack Development with C# and Blazor [New]

'Full stack development' encompasses the practice of engaging with every layer of technology stacks in software development, typically involving both front-end and back-end tasks. Blazor facilitates the creation of modern applications across various platforms, including web, single page, mobile, and desktop applications. Blazor uniquely enables the use of C#, leveraging the skills and tools familiar to .NET developers. Consider attending this training to gain an early advantage in mastering Blazor. All examples and labs are based on the latest Long-Term Support (LTS) version of .NET and Visual Studio.

Engineering Cisco Meraki Solutions (ECMS) [New]

The Engineering Cisco Meraki Solutions training helps you gain the core knowledge and skills needed to deploy, plan, design, implement, and operate complex Cisco Meraki solutions. This training combines Engineering Cisco Meraki Solutions Part 1 and 2 trainings. This training helps prepare you for roles focused on implementing, securing, and managing Cisco Meraki™ based networks from a centralized dashboard. Topics covered include Cisco Meraki's cloud-based solutions, understanding of network security protocols, design of scalable architectures, and application of troubleshooting strategies. This training prepares you for the Cisco Meraki Solutions Specialist (ECMS 500-220) exam. If passed, you earn the Cisco Meraki Solutions Specialist certification.

Implementing and Operating Cisco Enterprise Network Core Technologies (ENCOR)

The Implementing and Operating Cisco Enterprise Network Core Technologies (ENCOR) v1.3 training gives you the knowledge and skills needed to install, configure, operate, and troubleshoot an enterprise network and introduces you to overlay network design by using SD-Access and SD-WAN solutions. You'll also learn to understand and implement security principles and automation and programmability within an enterprise network. This course helps you prepare to take the 350-401 Implementing Cisco® Enterprise Network Core Technologies (ENCOR) exam

Price: 3.495 € excl. VAT / participant

Implementing and Operating Cisco Security Core Technologies (SCOR)

The Implementing and Operating Cisco Security Core Technologies (SCOR) v1.0 course helps you prepare for the Cisco® CCNP® Security and CCIE® Security certifications and for senior-level security roles. In this course, you will master the skills and technologies you need to implement core Cisco security solutions to provide advanced threat protection against cybersecurity attacks. You will learn security for networks, cloud and content, endpoint protection, secure network access, visibility and enforcements. You will get extensive hands-on experience deploying Cisco Firepower Next-Generation Firewall and Cisco ASA Firewall; configuring access control policies, mail policies, and 802.1X Authentication; and more. You will get introductory practice on Cisco Stealthwatch Enterprise and Cisco Stealthwatch Cloud threat detection features.
This course, including the self-paced material, helps prepare you to take the exam, Implementing and Operating Cisco Security Core Technologies (350-701 SCOR), which leads to the new CCNP Security, CCIE Security, and the Cisco Certified Specialist - Security Core certifications.

CISCO

SESSIONS

Implementing Cisco Application Centric Infrastructure (DCACI)

The Implementing Cisco Application Centric Infrastructure (DCACI) v1.2 course shows you how to deploy and manage the Cisco® Nexus® 9000 Series Switches in Cisco Application Centric Infrastructure (Cisco ACI®) mode. You will learn how to configure and manage Cisco Nexus 9000 Series Switches in ACI mode, how to connect the Cisco ACI fabric to external networks and services, and the fundamentals of Virtual Machine Manager (VMM) integration. You will gain hands-on practice implementing key capabilities such as fabric discovery, policies, connectivity, VMM integration, and more. This course earns you 40 Continuing Education (CE) credits towards recertification.

Implementing Cisco SD-WAN Solutions (ENSDWI)

The Implementing Cisco SD-WAN Solutions (ENSDWI) training helps you design, deploy, configure, and manage the Cisco Software-Defined WAN (SD-WAN) solution in a large-scale network, including how to migrate from legacy WAN to Cisco SD-WAN. You will learn best practices for configuring routing protocols in the data center and the branch, and how to implement advanced control, data, and application-aware policies. This training also covers Cisco SD-WAN deployment and migration options, placement of controllers, how to deploy WAN Edge devices, multicast and quality of service (QoS), how to configure Direct Internet Access (DIA) breakout, and how to deploy a Multi-Region Cisco SD-WAN fabric. You will also learn about the various Application Quality of Experience (AppQoE) traffic optimization capabilities. Finally, the training looks at the different Cisco SD-WAN security options available.

RH362 - Red Hat Security: Identity Management and Authentication

Provide help to secure, centralized identity management services to coordinate user authentication and authorization with client systems, network services, and Windows domains. Red Hat Security: Identity Management and Authentication (RH362) provides the skills to configure and manage Identity Management (IdM), the comprehensive identity management component bundled with Red Hat Enterprise Linux. Some topics covered in this course are central management and provisioning of user accounts; design and installation of IdM server topologies; operation of the integrated DNS and TLS Certificate Authority services; management of two-factor authentication, smart card authentication, and operation as a single-sign on provider; integration and management of two-way trusts with Active Directory; and troubleshooting and disaster recovery planning. Registration of Linux clients to IdM and operation in enterprise environments that use both Linux and Microsoft Windows clients and servers is discussed. This course helps students to gain the skills with this technology most requested by customers.

RH436 - Red Hat High Availability Clustering

This course provides intensive, hands-on experience in deploying and managing shared storage and server clusters. In this course, you will learn how to provide highly available network services to a mission-critical enterprise environment through the deployment and management of shared storage and server clusters. Created for senior Linux system administrators, this course strongly emphasizes lab-based activities. You will set up a cluster of systems running the Pacemaker component of the Red Hat Enterprise Linux High-Availability Add-On, and deploy Linux-based services such as web servers and databases on that cluster. Cluster storage components from the Resilient Storage Add-On are also covered; installations and applications that require multiple cluster nodes can access the same storage simultaneously. This includes Logical Volume Manager (LVM) Shared Volume Groups, Red Hat Global File System 2 (GFS2), and Device-Mapper Multipath. This course is based on Red Hat Enterprise Linux 8.3

RED HAT

SESSIONS

DO180 - Red Hat OpenShift Administration I: Operating a Production Cluster [Most wanted]

This course prepares OpenShift cluster administrators to manage Kubernetes workloads and to collaborate with developers, DevOps engineers, system administrators, and SREs to ensure the availability of application workloads. This course focuses on managing typical end-user applications that are often accessible from a web or mobile UI and that represent most cloud-native and containerized workloads. Managing applications also includes deploying and updating their dependencies, such as databases, messaging, and authentication systems. The skills that you learn in this course apply to all versions of OpenShift, including Red Hat OpenShift on AWS (ROSA), Azure Red Hat OpenShift, and OpenShift Container Platform.
This course is based on Red Hat Openshift 4.12

Price: 3.740 € excl. VAT / participant

DO188 - Red Hat OpenShift Development I: Introduction to Containers with Podman [Most wanted]

A developer introduction to building and managing containers with Podman for deploying applications on Red Hat OpenShift Container Platform. This course introduces students to building, running, and managing containers with Podman and Red Hat OpenShift. This course helps students build the core skills for developing containerized applications through hands-on experience. These skills can be applied using all versions of OpenShift, including Red Hat OpenShift on AWS (ROSA), Azure Red Hat OpenShift, and OpenShift Container Platform.
This course is based on Red Hat® Enterprise Linux® 8, Podman 4.2 and Red Hat OpenShift® 4.12.

DO281 - Red Hat OpenShift Administration II: Configuring a Production Cluster [Most wanted]

Configure, manage, and troubleshoot OpenShift clusters and containerized applications. This course prepares OpenShift Cluster Administrators to perform daily administration tasks on clusters that host applications provided by internal teams and external vendors, enable self-service for cluster users with different roles, and deploy applications that require special permissions such as such as CI/CD tooling, performance monitoring, and security scanners. This course focuses on configuring multi-tenancy and security features of OpenShift as well as managing OpenShift add-ons based on operators. The skills you learn in this course can be applied using all versions of OpenShift, including Red Hat OpenShift on AWS (ROSA), Azure Red Hat OpenShift, and OpenShift Container Platform. This course is based on OpenShift Container Platform 4.12.

DO329 - Building Resilient Microservices with Istio and Red Hat Service Mesh

Openshift created an enterprise-ready, multi-tenant platform that made deploying and scaling microservice applications efficient and easily repeatable. But as these architectures become larger and more complex, defining how these services interact with each other becomes increasingly difficult. Red Hat OpenShift Service Mesh comprises 3 products—Istio, Jaeger, and Kiali—that facilitate service interaction management, provide service tracing, and create a visual representation of communication pathways.

DO371 Enterprise Kubernetes Storage with Red Hat OpenShift Data Foundation

Traditional storage options available to Kubernetes administrators are limited and lack flexibility and/or versatility. Red Hat OpenShift Data Foundation provides real advantages, even when it is backed by cloud storage such as AWS EBS and sophisticated on-prem legacy storage like SAN arrays. Many companies rely on third-party solutions to manage backup and disaster recovery in production. However, proper planning to implement these solutions requires knowledge of the Kubernetes CSI and OAPD APIs.

Mastering DAX

Power BI is a suite of business analytics tools to analyze data and share insights. DAX (short for Data Analysis Expressions) is a language used in Power BI and Analysis Services Tabular Models to create derived calculations such as year-to-date, percentage of total, etc. In this course you will learn how to use DAX to create measures and other derived calculations. You will also learn to use DAX as a query language.

Analyzing your Data with Power BI for Business Users [New]

Power BI is a business analytics service that enables users to visualize and share insights from their data through interactive dashboards and reports. It allows you to connect to various data sources and create visually compelling reports that can be accessed across different devices.
This course covers all important aspects of Power BI. You learn how to connect to any data source using Power Query. The next step is enhancing the data model by using relationships, hierarchies, calculated columns, and measures. When the model is finished, you will build an interactive report and maintain & share it in the Power BI Service.
If you are also interested in more technical topics like the Power Query language, the DAX language, Power BI Gateways and Security, we recommend following our 5-day course Analyzing your data with Power BI for BI Professionals.

Access 365 - Level 1

Most businesses have a lot of data, from customer details and employee records to product specifications data and invoicing and scheduling systems. By learning the basics of Microsoft Access, you can get to grips with how to store that data effectively in ways that make it easy to update, query and report on it for a range of outputs. This is an intensive Access training course, introducing delegates to the concepts of creating relational databases using MS Access.
Microsoft Access is a very powerful database application designed to save you time and make creating relational databases easier.

SESSIONS

Access 365 - Level 2

Many organisations have large databases in Access that have built up over the years; staff have learned enough to build a database with a good relational structure, create forms to enter data and write queries to generate some useful reports. However, when databases get big making your queries and forms effective can become more complex and it is worth investing in advanced Access training to get the most from your data and save time. And our Advanced Microsoft Access course teaches delegates how to analyse data by creating complex queries, make forms and reports more efficient, speed repetitive tasks by creating macros.

MICROSOFT OFFICE

SESSIONS

Visualize your projects with Visio WBS/RBS organization charts

This MS Visio Course, axed on project management, focuses on the creation of WBS (Work Breakdown Structure) to break down a project into manageable tasks, which are easier to plan and execute, as well as RBS (Resource Breakdown Structure) to visualize the necessary resources in order to efficiently assign responsibilities. Together, these tools offer a comprehensive overview and details of a project, to facilitate an optimal and visual project management.

Price: 450 € excl. VAT / participant

Feedback, a management tool

"How can I give continuous feedback in an open and constructive manner? How can I prepare myself for a feedback conversation? Which tools can I use? To give and take feedback is essential for efficient communication and good functioning within an organization. This is why feedback shouldn't only be limited to key moments such as counselling and performance reviews or whilst encountering problems or dealing with crisis situations.

Objectives:
• Master the two techniques: positive feedback, constructive criticism feedback.
• Recognize the communication needs of your team.
• Master a method for giving feedback without demotivating.

Price: 550 € excl. VAT / participant

Dutch in Brussels
28 January
27 March
